## PROFESSIONAL SUMMARY

Front-End Developer with 4+ years of hands-on development experience across professional and project-based work, specializing in React.js, JavaScript, TypeScript, and responsive UI development. Experienced building real-world business applications and ERP-style systems, integrating REST APIs, implementing state management, authentication, RTL/LTR interfaces, and real-time workflows. Delivered production features independently and with cross-functional teams, with proven impact in performance optimization, reusable UI architecture, and reliable user experiences.

## TECHNICAL SKILLS

**Frontend:** React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, React Router, Context API, Custom Hooks

**State & Data:** Zustand, React Query, Axios, REST APIs, API Integration, Async Data, JSON, HTTP

**UI & Styling:** Tailwind CSS, Bootstrap, Sass/SCSS, Responsive Design, Mobile-First, RTL/LTR, Accessibility

**Architecture & Engineering:** SPA Architecture, Component-Based Architecture, Reusable Components, Authentication, Role-Based UI, Form Validation, Error Handling, Performance Optimization, Cross-Browser Compatibility, Debugging

**Tools & Workflow:** Vite, npm, Git, GitHub, Figma, Agile/Scrum, Production Builds & Deployment

## PROFESSIONAL EXPERIENCE

**Junior Front-End Developer** | Diet To Door | May 2022 - January 2024

- Delivered 10+ production-ready responsive pages, reducing average load time by 25% through code splitting, lazy loading, and optimized asset delivery.
- Translated Figma designs into responsive, pixel-accurate interfaces across desktop and mobile breakpoints and built reusable Bootstrap + Sass/SCSS UI patterns.
- Integrated RESTful APIs into production workflows, reducing manual update overhead by 40% while improving data consistency and user experience.
- Collaborated with backend developers and designers in two-week Agile sprints to ship features and maintain stable production releases.
- Applied semantic HTML, accessibility practices, responsive design, and cross-browser compatibility techniques.

**Front-End Developer** | Freelance & Personal Projects | February 2024 - Present

- Design and develop React-based SPAs and business applications from requirements gathering through implementation, iteration, and deployment.
- Build reusable component systems and scalable frontend structures using React, Context API, Zustand, React Query, and custom hooks.
- Integrate REST APIs and manage asynchronous data with loading, error, caching, authentication, and role-based UI states.
- Develop complex business workflows for clients, attendance, subscriptions, orders, reports, expenses, inventory, dashboards, and admin operations.
- Build responsive Arabic RTL and English LTR interfaces and collaborate directly with clients to translate requirements into usable product features.

## SELECTED PROJECTS

**Gym Management ERP - Gym Command Center** | React, TypeScript, Vite, Tailwind CSS, REST APIs, Socket.IO

Built a production-oriented gym operations frontend covering clients, attendance, subscriptions, employees, payments, expenses, reports, notifications, settings, dashboards, search/filtering, and role-based workflows. Developed reusable tables, forms, modals, responsive layouts, authentication flows, and real-time UI integrations.

**Tasty Table - Restaurant Management System** | React 18, Vite, Zustand, React Router, REST APIs, Socket.IO

Built a comprehensive restaurant management frontend for ordering, menu management, kitchen/barista workflows, waiter operations, payments, reports, expenses, attendance, inventory, and role-based interfaces. Implemented Arabic RTL/English LTR UX, reusable business components, responsive workflows, and real-time order updates.

**Al-Ahram ERP - Accounting & Business Management** | React, Vite, ASP.NET Core API, REST APIs, RTL

Developed Arabic RTL ERP interfaces for invoice creation and management, temporary invoices, business data workflows, and responsive administrative screens with API-driven frontend architecture.

**Diet To Door - Production Web Application** | HTML5, CSS3, JavaScript, Bootstrap, Sass, jQuery, REST APIs

Built the customer-facing meal-planning experience used in production, including API-driven meal selection flows and responsive interfaces for calorie-based meal management. Applied semantic HTML and accessibility practices.

**Fit Tracker - Calories Calculator** | React, Tailwind CSS, Context API, React Router

Built a React SPA for calorie tracking with dynamic food search and macronutrient breakdowns, using Context API and custom hooks for shared state and reusable components.

## EDUCATION

**Bachelor of Science in Computer Science** | Culture & Science City University, 6th of October | 2024 - Present

Relevant foundations: algorithms, data structures, OOP, and software engineering.
