PROFESSIONAL SUMMARY

Front-End Developer with **1.5+ years of professional experience** specializing in **React.js** and modern JavaScript (ES6+). Proven track record delivering production-grade, responsive, and accessible web applications — from pixel-perfect Figma implementations to full REST API integrations. Experienced in Agile teams with a strong ownership mindset: ships features end-to-end, writes clean and maintainable code, and consistently focuses on performance optimization and real user impact. Currently pursuing a BSc in Computer Science to reinforce software engineering fundamentals alongside active professional practice.

TECHNICAL SKILLS

Core Languages	HTML5 · CSS3 · JavaScript (ES6+)
Frameworks & Libraries	React.js · Tailwind CSS · Bootstrap · SASS · jQuery
React Ecosystem	React Router · Context API · Custom Hooks · Axios · React Query
Build & Dev Tools	Vite · npm / yarn · Git · GitHub
Design & Workflow	Figma (design handoff) · Responsive / Mobile-First Design · Agile / Scrum
Engineering Practices	SPA Architecture · Performance Optimization · REST API Integration · Clean Code · Accessibility (a11y) · Cross-browser Compatibility

PROFESSIONAL EXPERIENCE

Junior Front-End Developer

Diet To Door · Full-time · May 2022 – January 2024

- Delivered **10+ production-ready responsive pages**, achieving a **25% reduction in average load time** through code splitting, lazy loading, and optimized asset pipelines.
- Translated Figma designs into pixel-perfect UI components with zero visual discrepancy across breakpoints, eliminating design review cycles.
- Integrated RESTful APIs end-to-end — replacing manual data workflows and **reducing update overhead by 40%**, while improving data accuracy.
- Shipped features across two-week Agile sprints in close collaboration with back-end engineers and designers, maintaining **zero critical bugs in production** throughout tenure.
- Architected a reusable Bootstrap + SASS component library, improving consistency across the product and accelerating future feature development.

Front-End Developer

Freelance & Personal Projects · February 2024 – Present

- Independently scoped, designed, and delivered multiple **React.js SPAs** — handling everything from client requirements to final deployment.
- Applied scalable state management using **Context API and custom hooks**, avoiding unnecessary third-party dependencies while keeping code clean and testable.
- Managed complex async data flows with **Axios and React Query** — implemented loading states, error boundaries, and cache strategies for reliable UX.
- Configured **Vite** build environments for fast development cycles and optimized production bundles, improving delivery speed.

- Maintained direct client communication throughout projects — gathering requirements, iterating on feedback, and delivering on time with full accountability.

PROJECTS

Diet To Door — Web Application

Live Production App · HTML5 · CSS3 · JavaScript · Bootstrap · SASS · jQuery

Role: [Sole Front-End Developer](#) · [UI Architecture](#) · [REST API Integration](#) · [Performance](#)

User-facing meal-planning application that helps real customers select and manage daily meals based on caloric targets.

Challenge: Complex meal-selection logic needed to be surfaced through a clean, non-technical interface without sacrificing responsiveness.

Solution: Built a dynamic component system driven by API data, abstracting backend complexity behind intuitive UI flows. Applied semantic HTML and ARIA roles for accessibility compliance.

Live: <https://app.diettdoor.com/Login> **GitHub:** github.com/yossef-ibrahimm

Diet To Door — Marketing Landing Page

Live · HTML5 · CSS3 · JavaScript · Bootstrap · SASS

Role: [Front-End Developer](#) · [Performance Optimization](#) · [SEO](#) · [Mobile-First Design](#)

Marketing landing page for the Diet To Door brand, built for speed, SEO performance, and full cross-device compatibility.

Challenge: Required fast First Contentful Paint (FCP) to support organic SEO, while maintaining visual quality across all device sizes.

Solution: Applied critical CSS inlining, image compression, and deferred script loading. Used SASS mixins for a clean mobile-first breakpoint system.

Fit Tracker — Calories Calculator

Live SPA · React.js · Tailwind CSS · Context API · React Router

Role: [Front-End Developer](#) · [State Management](#) · [SPA Architecture](#) · [Reusable Components](#)

React SPA for tracking daily calorie intake, featuring dynamic food search and a per-macronutrient breakdown dashboard.

Challenge: Needed shared, reactive state across multiple routes without the overhead of a full Redux setup.

Solution: Implemented a Context API + custom hook pattern providing clean global state access. Each UI component is fully isolated, reusable, and independently testable.

EDUCATION

Bachelor of Science — Computer Science

Culture & Science City University, 6th of October · 2024 – Present · In Progress

Pursuing a formal CS degree to deepen fundamentals in algorithms, data structures, OOP, and software engineering — directly informing front-end architecture decisions made in daily professional practice. Balancing a full academic load alongside active freelance development work, demonstrating **strong time management, self-discipline, and commitment to continuous growth.**

CONTINUOUS LEARNING

- Completed structured React.js and advanced JavaScript (ES6+) courses focused on real-world application patterns.
- Regularly engages with front-end engineering resources: React official docs, web.dev, CSS-Tricks, and GitHub open-source projects.
- Practices performance profiling, accessibility audits, and clean code reviews through personal projects.
